

SNEHA NAHAK

Bengaluru, Karnataka, India | +91-7847867991 | snehanahak6@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

A Full-Stack Software Engineer with nearly 1 year of experience building scalable, cross-platform compatible web services and responsive digital interfaces. Proficient in React.js, TypeScript, JavaScript, Node.js, Express.js, and MongoDB, with a proven ability to combine full-stack development and UI/UX design thinking to engineer reliable, user-centric digital solutions.

EDUCATION

Full-Stack Software Development — Masai School, Bengaluru, India | Completed: August 2025

Bachelor of Science (B.Sc.) in Physics — Vikram Deb University, Jeypore | Graduated: April 2024

CORE SKILLS

Languages & Web: TypeScript, JavaScript (ES6+), HTML5, CSS3

Frontend Engineering: React.js, Next.js, Material-UI, Tailwind CSS, SPA, State Management, Responsive Design

Backend & Systems: Node.js, Express.js, RESTful APIs, OpenAI API Integration, Asynchronous Processing

Databases & Cloud: MongoDB Atlas, Firebase, Data Schema Design, CSV Streaming

Tools & Methodologies: Git, GitHub, Postman, Vercel, JWT Authentication, Vite, Agile Development

UI/UX & Design: Figma, Wireframing, Design Systems, Component-Driven Development

PROFESSIONAL EXPERIENCE

Full-Stack Developer — Brighter India

Bengaluru, Karnataka, India | December 2025 – August 2026

RO Access Portal (Election Commission of India Operational Platform)

- Engineered a full-stack portal for Returning Officers to facilitate election data entry, verification, and evaluation workflows.
- Built modular client architecture in React and TypeScript with centralized state handling, form validation, and accessible UI workflows.
- Connected frontend application layers with backend REST APIs to maintain transaction consistency.
- Implemented real-time administrative notification streams via Firebase to reduce multi-user communication latency.
- Designed and maintained a reusable component library to standardize user experience and accelerate team feature delivery.

Automated Voter ID Registry & Reconciliation Pipeline

- Engineered a backend data extraction pipeline using Node.js and OpenAI vision models to parse structured data from dual-sided voter ID images into CSV files.
- Built row-level reconciliation algorithms to cross-verify extracted text fields, validate syntax formatting, and flag record discrepancies.
- Implemented asynchronous execution loops and request throttling to ensure stable batch data processing within external API rate limits.

PERSONAL PROJECTS

ResuMeUp — Dynamic Resume Builder Platform | [Live Demo](#) | [GitHub](#)

React.js, Node.js, Express.js, MongoDB Atlas, HTML5, CSS3

- Engineered a full-stack single-page application enabling users to draft, organize, and structure resume documents.
- Implemented synchronized bi-directional state management in React to render immediate, real-time document previews upon data entry.
- Developed RESTful backend endpoints in Node.js and Express to serialize, store, and retrieve document data in MongoDB Atlas.
- Integrated automated PDF rendering logic to generate clean, standard printable files directly from user form inputs.

ACHIEVEMENTS

- Participated in hackathons, developing rapid-prototype web solutions using React.js, Node.js, and modern web technologies.
- Secured 1st Rank in Class 10 and Class 12 for outstanding academic performance.
